ADVANCED STATE MANAGMENT

My approach to the code :

for the local_state.dart, is just a simple increment or decrement the counter, an extra note the counter cannot drop below 0

for the global_state.dart, its just the same as the local_state.dart but with extra feature for example :

1.adding or removing a counter

2.can change the name of the color

3.a drag and drop to change the counter posisition

4.etc

probolems :

1.the color mechanism so it change

2. Making the code looks neat with the right indentation

advanced feature :

1. A color selection using "Colors.primaries.take(8).map((c)" to make up the color for the counter widget

2.animation "void reorderCounters(int oldIndex, int newIndex)" while using this it does a animation whene the widget is being update

3.drag and drop "ReorderableListView.builder" a simple drag and drop in which you press a button so you can move the counter widget
